**Market Strategies
\$10,000 Trading Account Traders Comments**

We have 6 open long positions:

CRR June 45Calls
DD June 70 Calls
ISRG May 29th 510 Calls

TXN June 55 Calls
SPY May29th 210 Puts and
XLF June 24 Calls

Funds in Use \$ 1858

Do they mislead, or are they just inept ??

Clearly I am now more concerned about the divergence of the Transports since we broke all of the prior bottoms made since the new highs of late November last year. I made the "percentage play" in the IYT buying the calls with a "right or right out" strategy. The trade was a loss, but only \$120. The other balance position in the SPY puts was a loss at the 50% down rule, so basically it turned into an "alligator spread" where I got eaten alive from both sides.

The problem for me in the divergence issue is the fact that people are again starting to over use the term "bubble," and it's a very scary term. If it's not social media or biotech or momentum stocks, or venture-cap funds, it's the bond market. While I realize that everyone from CNBC to CNN to the multitudes of sell side analysts need content to deliver, and add to the fact that we haven't had a 10% correction in years, this area is ripe for the talking heads to exploit.

But if you look for the text book version of what creates a bubble, you will find that the word is tossed around every time any asset class has a dramatic increase in value. I call it rotation since the term bubble requires a mania that includes not only overvaluation, but also over leverage. The "Dot-com" bubble clearly was in fact a bubble...The housing crisis was a bubble since besides the extreme overvaluation, it was accompanied by a dramatic increase in the leverage used to fuel purchases. Funders issued mortgages with no money down and gave people who clearly didn't have the ability to meet the requirements of that mortgage the ability to buy.

While we will in fact get that correction, the market sentiment is still solidly neutral and the issue of over-leverage does not exist. The amount of money sitting on the sidelines and the participation of the public is near dramatic lows. Until that changes we will grind higher. If you want something to worry about just follow the Chinese/American dispute over whether the new man-made islands in the South China Sea extend the Chinese sovereignty as we continue to fly-over and to be warned by the Chinese that we are violating their airspace. This is a prescription for news that causes immediate and dramatic actions.

My question of the week is why are we so reliant on numbers like home sales or housing starts or employment numbers? This week we learned that the GDP has been misleading for the last 10 years. Taken along with the number of times that all these numbers are "seasonally-adjusted" or adjusted in the weeks and months that follow their release, what is the point?? They are not to be utilized to decide on a day by day or even month by month basis. If you want to invest, you already know how things are going by your paycheck and how confident you feel.

Enjoy your long weekend and we'll get started on Tuesday.
...**CAM**

Market Strategies \$10,000 Trading Account Trade Table

New Trades: Options Account:

(1) Buy 15 GRPN July 7 Calls @ \$ 0.14

(2) Buy 10 SNSS July 2.50 Calls @ \$ 0.35

DATE	TRADE	PRICE	COST	PROCEEDS	RESULTS
05/22	Bought 10 VA June 30 Calls	0.60	600

Market Strategies \$100,000 Trading Account

New Options Trades:

- 1) Buy 30 GRPN July 7 Calls @ \$ 0.14**
- 2) Buy 20 SNSS July 2.50 Calls @ \$ 0.35**

There were four closed long option positions, the CRR June 45 Calls, the ISRG May 29th 510 Calls, the June IYT 152 Calls and the SPY May 29th 210 Puts netting a loss of \$ 1,794.00. We also liquidated the XRGYF stock position for a loss of \$ 1,965 for a totaling \$ 3,759.00. We bought 100 shares of the AGQ for \$ 43.28, the Silver ETF. For the full year to date, we have gains of \$ 13,406.00. Open position losses increased to \$ 9,607.00. There are four long Option positions: 8 DD June 70 Calls; 4 TXN June Calls; 20 Virgin Airways (VA) June 30 Calls and 12 XLF June 24 Calls. The options expire on the third Friday of each Month unless otherwise posted. The Stock table has the following 20 positions: AA, ARRY, AGQ, BAC.B.WS, BCRH, BSBR, CRM, FB, FCX, GILD, IMAX NAT NBG (3), REPR, RPTP, SAN, TEXQY, XCO:

The options call for a \$ 2,500 investment unless otherwise stated; each stock position requires \$5,000 unless otherwise specifically stated. We are basing money management on a hypothetical \$ 100,000.00 and are using a total of \$89,631.00 for the 20 open stock positions. There are four long option positions requiring \$ 3,716.00 totaling \$ 93,347.00, leaving \$ 6,653.00 in Cash. These figures are approximate and there might be errors. We have not counted the dividends received from Apple, JP Morgan, BSBR (Brazil), Santander, Blue Capital Reinsurance and others. Blue Capital issued a special extra dividend of \$ 0.66 per share which enabled us to reduce our cost by that amount. In addition it pays about 7% per year in regular dividends. We do not count commission costs and all trading once again is hypothetical.

Executions that have occurred at or near the open or close of trading sometimes vary from our actual numbers. For example, when something opens down and it is through our price, we take the next trade whether it is an uptick or continues lower. This sometimes results in a 50% trade that is slightly above or below the exact number...

Previous Week's Recommendations and Rules for the Market Strategies \$100,000 Portfolio Trading Account

- All options count for about \$ 2,500.00 for model portfolio calculations unless otherwise stated
- When the option has doubled sell half the position
- Stop Loss protection is either half or offered with each trade
- The cost of the option is the asking price (or the price between the bid and ask, whichever is more realistic)
- The options will be followed until closed out.
- Option Symbols are stock symbol with expiration month and strike price

Option	Cost	Date	Sold	Date	Profit/(Loss)
VA June 30 20 lots	Calls 0.60	05/22/15			
IYT June 152 6 lots	Calls 1.85	05/20/15	1.45	05/22/15	(\$ 240)
SPYMay29th 210 8 lots	Puts 1.20	05/14/15	0.60 (50% Loss Rule)	05/19/15	(\$ 480)
DD June 70 8 lots	Calls 1.60	05/13/15			
TXN June 55 4 lots remaining	Calls 0.90	05/12/15	1.80 (100% Profit Rule)	05/15/15	\$ 360

Market Strategies Fundamentals

Both the Dow and S&P made new all-time highs Thursday, but lost some momentum Friday going into the long weekend. The S&P 500 closed up 3.33 to 2,126.06 after achieving a new all-time high close of 2130.82. The Dow closed at 18,232.02 after reaching a record close of 18,312.39 on Thursday. Meanwhile the DJ Transportation Average was only able to add 47 points on the big day Thursday and then continued Friday to make new lows closing at 8,482.31, off 198.47 or 2.29% for the week. The Tranny had been the leading sector for the last five years until now they have decided to increase capacity. The DJ Utilities averages have also lagged. The DJU closed at 588.13 for the week up 2.39 or 0.41%, but down from 643,23 off 8.6% from the high for the year.

Aside from the most recent deluge in the prices of airline stocks, truckers and railroads have lagged as a result of poor demand for basic materials and traditional necessities such as steel, oil, coal. They have been overtaken in importance by Health Care, which let all Dow Industrial Groups last week up 1.03%. Technology stocks were up 0.73% and was second best. Meanwhile Basic Materials fell 0.77% and continued to be among the worst performing. Oil & Gas was off 0.72%.

Meanwhile, it is unlikely that the small 2% expected increase in airline capacity will have much effect on denting their profits going forward. There are only four major carriers; Southwest, Delta, American and United which are dominant at their major hubs and terminals with smaller airlines like Virgin America and Spirit likely to increase their capacity more but hardly making a dent in the overall profitability. U.S. airline air-travel demand is up about 3% this year above the perceived expansion of capacity. American Airlines (AAL: \$ 48.67) -\$ 6.06 or 12.6% and United (UAL: \$ 53.69) - \$ 7.91 or 12.8%, fell the most. Southwest Airlines (LUV \$ 36.86) - \$ 5.03 or -12%; Delta (DAL: \$ 43.18) -\$ 3.82 or 8%; Spirit (SAVE: \$ 62.34) fell \$ 4.77 or 7% while Virgin Air (VA: \$ 28.49) + \$ 0.21 or 0.7% was actually higher on the week.

Market Strategies Economic Data

After a big pullback in housing starts in the first quarter, construction levels rebounded in a big way in April. Starts are now back on its 2014 upward path. Single-family starts increased 16.7% in April to 733,000 from 628,000 in March. That was the most single-family homes started since January 2008

when 773,000 were started. It was also the largest monthly increase, in both percentage and absolute terms, since November 2013. Housing starts increased 20.2% in April to 1.135 mln from an upwardly revised 944,000 (from 926,000) in March. The Briefing.com Consensus expected Housing Starts to increase to 1.019 mln.

Category	APR	MAR	FEB	JAN	DEC
Starts	1135K	944K	900K	1080K	1080K
1 Unit	733K	628K	600K	706K	724K
Multi Units	402K	316K	300K	374K	356K
Permits	1143K	1038K	1098K	1059K	1077K

The Core CPI rose 0.3% in April, well above the consensus and Fed objective of 0.2% which stunted what was the possibility of a solid bond rally. The strong dollar was boosting bonds prior to the CPI notice. A 7% increase in medical costs was the biggest monthly increase since January 2007. While medical costs soared, commodity prices were lower again led by WTI Crude, off 1.53% Friday to 69.79/bbl while copper fell sharply all week down \$ 11.35/ton or 4.3%.

Fed Chair Janet Yellen speaking in Providence R.I. said that a rate hike would be forthcoming if the economy performs as the FOMC expects. She went on to say the increases would be gradual following the first rate increase. She said the economy still faces headwinds from persistently low business investment and energy sector weakness and that it will be several years before the Fed Funds Rate is back to normal levels.

The Conference Board's Leading Economic Index increased 0.7% in April after increasing an upwardly revised 0.4% (from 0.2%) in March. The Briefing.com Consensus expected the index to increase 0.3%. That was the largest increase in the leading indicators since a 1.0% increase in July 2014. Building Permits easily topped expectations (1.143 mln units vs 1.065 mln units) contributing 0.29 percentage points to the Leading Indicators growth Rate. Nine of the Ten indicators were higher.

The Leading Economic Index maintains steady growth.

Market Strategies Cycles

One of the six basic tenets of Dow Theory states that market averages must confirm each other. When major indices diverge, it is a potential warning sign. DJIA and S&P 500 have broken out to new all-time highs once again this year, mostly on tepid economic data and the rather low bar set for first quarter earnings. NASDAQ and Russell 2000 recently reached new all-time highs, but are not yet participating in the breakout by DJIA and S&P 500. This lack of support from techs and small-caps is worrisome. When the Transports (DJTA) and Utility (DJUA) indices are added to the mix, the broader picture is even more concerning.

In the above chart, DJIA, DJTA and DJUA have been plotted since last October's market bottom. All three major indices moved in relative unison from mid-October through the end of last year. In January, DJIA and DJTA both struggled while DJUA average soared on to new highs on hopes of zero interest rate policy lasting even longer. DJIA and DJTA rebounded in February while DJUA crumbled and since the end of February DJUA has gone nowhere, the DJTA has drifted lower as energy moved higher while DJIA moved sideways and finally on to new highs.

Although timing is rarely perfect, the duration of time that DJTA and DJUA has languished is becoming significant. This week's new highs by DJIA and S&P 500 are not likely to last long without the support of tech, small caps, utilities and/or the transports.

Oil Prices making a significant low

Along with the drop in production, demand for crude oil is also rising in the U.S. For instance, gasoline demand is expected to reach an eight-year high this year, climbing to 9.1 million barrels per day as shown below:

Chart 8: The US is on track to consume the most gasoline (9.1 million b/d) this year since 2007

Source: EIA, BofA Merrill Lynch Global Commodity Research

[Source](#)

The improvement in gasoline consumption will be a result of an increase in road travel in the U.S. this year. As per the American Automobile Association, there will be a [5.3% jump](#) in Memorial Day travel this year, which will play a crucial role in powering gasoline consumption higher this year. As such, the combination of lower production and higher demand will lead to an improvement in pricing, and this will help crude oil sustain its recent momentum.

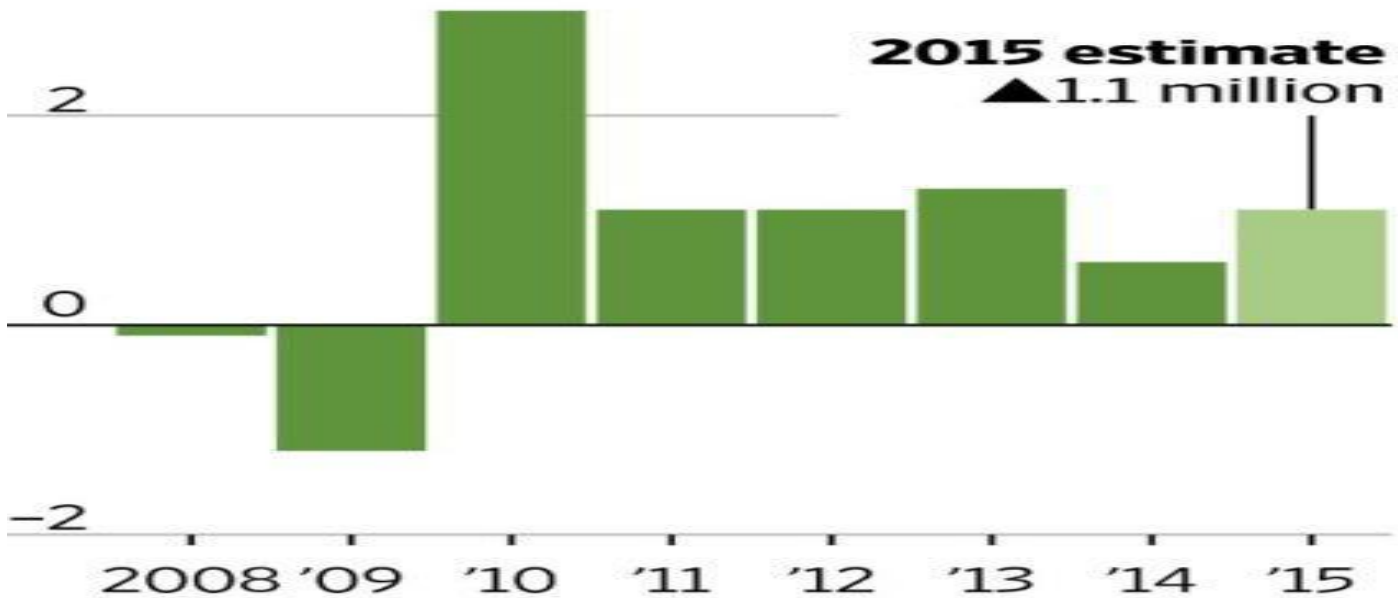

On the other hand, the oil war between the OPEC and the OECD could give many oil producers another shot in the arm. Since there are huge stockpiles of oil and gas in the U.S., there is a possibility that the export ban on crude oil exports will be lifted. As per the [U.S. Senate](#):

"U.S. Sens Lisa Murkowski, R-Alaska, and Heidi Heitkamp, D-N.D., along with 11 of their Senate colleagues today introduced the Energy Supply and Distribution Act of 2015 (S.1312). This bipartisan legislation would modernize federal energy policy by ending the outdated ban on crude oil exports." This will allow Continental Resources to compete in the international market and tap the expected growth in global demand as shown below.

THE WALL STREET JOURNAL.

Moreover, the absence of a ban will ease the oversupply situation in the U.S. market as well, thereby leading to better pricing. Hence, there are a number of positive indicators regarding crude oil pricing going forward.

Undervalued Small Cap Stocks

Spanish Bank Banco Santander (SAN: 7.38) is ready to outperform right now. In the last six months, this \$98 billion banking play has shed 30% of its market value, dragged lower by ongoing issues in the Eurozone financial system. But things could be about to change for long-suffering shareholders. SAN is starting to show signs of a bottom here. They will have better earnings having cut dividends.

Santander is currently forming a double bottom pattern, a bullish reversal pattern that looks just like it sounds. The double bottom is formed by a pair of swing lows that find support at approximately the same price level. The buy signal comes on a breakout through the peak that separates though two troughs. For SAN, that's the \$7.40 breakout level.

RMS Medical Systems, Inc (REPR 0.42)* Has doubled this year already and can double again . RMS designs, markets, manufactures portable easy to operate infusion devices, including needles and tubing. It is easy to handle by patients. The Freedom 60 is being marketed in Europe as well as gaining a footing among home-care professionals in America. The RescueVac is used in ambulances and planes for emergency suction.

Immune Therapeutics, Inc. (IMUN 0.08)* Buy now. IMUN is a specialty pharmaceutical company formed by patients funded by patients involved in the manufacturing, distribution and marketing of patented therapies to combat chronic, life-threatening diseases through the activation and modulation of the body's immune system. The Company's technology platform is built on two different immunotherapies, Low Dose Naltrexone (LDN) and Methionine-Enkephalin (MENK). These proprietary technologies exploit the power of the body's own immune system to find and kill diseased cells. We have bought the shares.

Low Dose Naltrexone (LDN) is a proprietary immunotherapy for the treatment of autoimmune diseases, HIV/AIDS, opportunistic infections, cancer and a range of other serious diseases. LDN works by boosting levels of endorphins (peptides produced in the brain and adrenal glands). These natural peptides are also powerful modulators of the immune system. In order for the body to maintain good health and wellness, there is a balance of the immune system between the cellular (Th1) and the humoral (Th2) immune systems. Immune balance is regulated through T-helper cells that produce cytokines. The Th1 lymphocytes help fight pathogens that are within cells like cancer and viruses through activation of interferon-gamma and macrophages. The Th2 lymphocytes target external pathogens like parasites, allergens, toxins through the activation of B-cells. In order for the body to maintain good health and wellness, there is a steady state of balance of the immune system between the cellular and humoral immunity as well as the regulatory T-cells that keep things under control.

When there is an excess of Th1 responses or cellular immunity conditions such as Crohn's disease, Type 1 diabetes mellitus and graft versus host diseases result. When there is over activity of the humoral immune system the body over reacts to allergens or even itself (autoimmunity). And with less cellular surveillance cancer can occur. What the body needs to remain healthy is a balance of the immune system. LDN is a compound that works on the body's natural opioid system to restore immune balance..

Stocks and ETF's bought over the past few weeks:

The heavy black marks indicate execution. We are further away from getting buy stopped into the HDGE. Buy the HDGE on a stop above 11.04. It only got to 11.02 a week ago Thursday. HDGE is the BEAR Financial Services ETF. The VIX is too low to initiate shorts or to be too bearish in the markets. We like having both long and short positions because of the tremendous uncertainty of the markets and world events.

Please check on the previous weekly market letters if there are questions.

We were stopped out of the Alcoa at 13.10. We are long in Diana Shipping at 6.60. The Scorpio Tankers were not ever filled as the market never got to our price. Try to buy a scale down on this move. The tanker shippers like NAT and GLNG are doing much better than dry shippers like Diana Shipping.

We missed Buying GLNG in liquefied N.G. at \$ 32 about the 50 day moving average.

We would initiate longs in oil stocks on the next down turn and would buy Exxon below \$ 85 this week.(All trading is hypothetical and intended as guidance)

Rule 17B Attestations and Disclaimers

Princeton Research, Inc. has approximately 2,581,578 shares of AIVN both free and restricted and represents them for Investor relations. Princeton also has about 40,000 shares of TXGE. Princeton is paid \$ 1,500 per month from RMS Medical Products. Princeton has bought 81,100 shares of RMS Medical Products. Princeton was paid \$ 2,500 to write a report on Xinergy. Princeton has signed a contract with CBLI to be paid \$ 2500 for July and August for investor relations. Princeton has been engaged by Target Energy. No contract is currently in place. Princeton was paid about 500,000 restricted shares of Leo Motors.

When there is no movement in penny stocks, even though there is none or very small losses, we will liquidate (sold AIVN on stop) even though we like the company, if money is needed for better opportunities.

We now believe REPR represents upside opportunity. The Target ADR trades at about \$ 4.50 in U.S. vs 0.05 in Australia. Princeton owns 400,000 Australia shares and about 900 U.S. ADR's.

Pursuant to the provisions of Rule 206 (4) of the Investment Advisers Act of 1940, readers should recognize that not all recommendations made in the future will be profitable or will equal the performance of any recommendations referred to in this e-mail issue. Princeton may buy or sell its free-trading shares in companies it represents at any time.
