## **\$10,000 Trading Portfolio** **Charles Moskowitz Discussion**

There are 4 Open positions:

Long 6 HL Sept Calls  
Long 5 AA June 9 Calls  
Long 4 TGT June 70 Calls  
Long 7 SLV June 15 Calls

**Funds in Use = \$ 1207**

Week 22 had another small profit of \$68 bringing YTD gains back up to \$4662. We have 4 open positions using a total of only \$1207. These are half positions in AA and SLV calls as well as the original position in HL September calls and a newly originated call position in the TGT 6/70s that were reinstated after we got stopped out on the 50% down rule from \$ .91.

Unfortunately we were unable to buy both Gold and Gold mining positions since although we got the move down we were expecting, it occurred while the futures were lower both Sunday and Monday night, but rallied into the open on Tuesday morning. Instead, we did buy the SLV (silver ETF) on Thursday and sold half on Friday for a decent trade. We still own half with a gain of \$ .25 on a \$ .38 call.

Again, the Friday numbers for employment gains was abysmal with a gain of 38,000 and while the talking heads did their best to spin it, it was bad, bad, bad. The growth of the economy is at best, lackluster. This again puts the Fed in the position of not having the “data” to raise rates even the measly .25%. They have clearly been behind the curve and missed the period of gains in unemployment of +200,000-250,000 when the demand was there. They actually could have liquidated partial positions (for a profit) from their massive balance sheet. I guess that would have lacked the esoteric value of a plan to do something nobody has a clue of how it would turn out, or how to liquidate it once it was built up. On top of that issue, there is the absolutely manipulated unemployment rate. The new number, 4.7%, is without any question well out of the realm of believability. It is based on the “labor force participation” rate of 62.6, the second lowest in history. Everybody is not retiring...they can’t find “real” jobs... If you’re over 60 and out of work you can count on being a greeter at Walmart, a bag boy (person) at a grocery, or if you have a decent car and a driver’s license, a driver for Uber or Lyft. If not, you’d better add “would you like fries with that” to your vocabulary.

What is truly unfortunate is that this period of zero rates has destroyed the possibility of meaningful returns (without excessive risk) for seniors and late stage pensioners. The Dept. of Labor has added restrictions in allowable senior’s investments. If you saved all your life and figured you’d be able to live off the income generated by CDs or savings accounts, not unreasonable over the last 50 years or so, you are out of luck. **CAM**

## **Market Strategies \$10,000 Trading Account Trade Table**

DATE	TRADES	PRICE	COST	PROCEEDS	RESULTS
06/03	Sold 8 SLV June 15 Calls	0.69		552	<b>248 Gain</b>
06/03	Bought 4 TGT June 70 Calls	0.49	196		
06/01	Bought 15 SLV June 15 Calls	0.38	570		
06/01	Sold 4 TGT June 70 Calls ( 50% Loss Rule )	0.46		184	<b>180 Loss</b>
05/26	Sold 5 AA June 9 Calls	0.71		375	<b>120 Gain</b>

## \$100,000 Trading Portfolio Stock Positions and Trades

Each stock is allocated a theoretical \$ 5,000 share of the portfolio unless otherwise indicated.

Stock	Purchase Price	Purchase Date	Stop/Loss	Price/ Date Sold	Profit/ (Loss)
SCO 20	89.28	05/13			
HL 1000	3.95	05/03			
MOS 200	27.53	05/02			
NVAX 500	5.38	04/18			
SCO 20	109.88	04/12			
EYES 500	5.04	04/04			
SUN 300	29.50	02/23		Sold 3 32.50 Calls	\$ 900 credit
EYES 1000	6.49	12/28			
TWTR 200	28.51	10/28			
MOS 100	43.55	08/14			
NBGGY 600	1.40	02/17			
SAN 600	8.40	12/16			
AA 500	14.21	10/16			
TEXQY* 200	6.56	7/11			
REPR* 5000	0.22	10/22/12			

Recommendations will be both listed in this letter and texted to members.

Previous closed out stock and option positions can be found in past Market Strategies Newsletter issues available in the VIP Subscribers Members Area.

For those of you who do not buy puts to protect your portfolio, there are many ETF's that are the inverse of the DOW. The symbols are **DOG, DXD, SDS,TZA and RWM**, which go up when the DOW, S&P 500 and Russell 2000 go **down and down when they go up. The DZZ goes up double when gold goes down.**

## **Market Strategies \$100,000 Trading Account**

There were two closed option positions:

15 SLV June 15 Calls were sold at \$ 0.91 which was half the 30 lot position making \$ 465.  
The 8 lot TGT Calls were sold at \$ 0.46 on the 50% Loss Rule for a setback of \$ 360.

The result for last week in options was a small gain of \$ 105.

There were no closing stock trades.

**For the entire year on closed out trades,  
our hypothetical profits increased to \$12,220.**

The options expire on the third Friday of each Month unless otherwise posted.

The Stock table has the following 16 positions:

AA, EYES(2), HL, MOS(2), NBGGY, NVAX, REPR,  
SAN, SCO(2), SUN, TEXQY, TWTR and short 3 SUN Calls

The options call for a \$ 2,500 investment unless otherwise stated; each stock position requires \$5,000 unless otherwise mentioned specifically.

We are basing money management on a hypothetical \$ 100,000 using a total of \$59,444 for the 15 open long stock positions plus a credit for the covered writes of \$900 for the SUN written Calls which reduces the requirement to \$ 58,544.  
The Open Option Positions require \$ 2450.  
This increases the margin requirement to \$ 60,994,  
leaving \$ 39,006 in cash.

These figures are approximate and there might be errors.

We have not counted the dividends received from many previous trades such as Apple, Colgate Palmolive, JP Morgan, Mosaic, North American Tankers, STNG, Santander, which pays over 5%, their Brazil affiliate BSBR and Blue Capital Reinsurance which was sold for a profit and many others.

The trading is hypothetical and we do not count commission costs.

Executions that have occurred at or near the open or close of trading sometimes vary from our actual numbers. For example, when something opens down and it is through our price, we take the next trade whether it is an uptick or continues lower. This sometimes results in a 50% trade that is slightly above or below the exact number.

### Previous Week's Recommendations and Rules for the Market Strategies \$100,000 Portfolio Trading Account

- All options count for about \$ 2,500.00 for model portfolio calculations unless otherwise stated
- When the option has doubled sell half the position
- Stop Loss protection is either half or offered with each trade
- The cost of the option is the asking price (or the price between the bid and ask, whichever is more realistic)
- The options will be followed until closed out.
- Option Symbols are stock symbol with expiration month and strike price

Option	Cost	Date	Sold	Date	Profit/ (Loss)
TGT June 70 8 lots	Calls 0.49	06/03/16			
SLV June 15 15 lots Remain	Calls 0.38	06/01/16	0.69 Sold 15	06/03/2016	\$ 465
TGT June 70 8 lots	Calls 0.91	05/20/16	0.46 ( 50% Loss Rule )	06/01/2016	( \$ 360 )
AA June 9 10 lots Open	Calls 0.47	05/19/16	0.71	05/26/2016	\$ 240
HL Sept 3.50 12 lots	Calls 0.85	05/03/16			
SUN June 32.50 3 lots written	Calls		3.00	02/23/2016	\$ 900 credit Covered write

Recommendations will be both listed in this letter and texted to members.

Previous closed out stock and option positions can be found in past Market Strategies Newsletter issues available in the VIP Subscribers Members Area.

## FRIDAY

10:00 hrs Michigan Sentiment - Prelim June ( NA vs 94.7 )

14:00 hrs Treasury Budget May ( NA vs -\$84.1Bln )

**Moody's reviews Italy's credit rating while Fitch reviews France's credit rating**

**U.S. Oil Rig Count increased the most since last December up 9 to 325**, Nat Gas rig count fell by 5 to 82 making a total US rig count of 408. July Crude closed at \$ 48.62, down \$ 0.71 or 1.4% for the week. Natural Gas closed the week at \$ 2.398.

## Market Strategies Fundamentals

**Stocks were lower last week** as a result of the disappointing Jobs report which added only 38,000 jobs, although 36,000 was abnormally due to the Verizon strike. Also, adding to the bearish employment report, employers hired 59,000 fewer workers in March and April than previously reported. The 10-Yr Note yields fell to 2- month lows while the 30-Yr Bond yields fell to almost 4 month lows.

Fed funds futures, based on the CME Group's Fed Watch and moved on Friday to price in a 4 percent perceived chance of a June rate hike, down from 21 percent late on Thursday. Chances of a July rate increase shrank to 34 percent on Friday, from 58 percent the day before.

Stocks, of course, had a somewhat muted reaction thinking the rate increase is postponed. The S&P 500 opened at 2104, down just one point, but made a lower low than the day before at 2085.36 about 3.25 points below Thursday's low before rebounding to a decent close at 2099, but still 6 points off on the day. The Dow made a lower low of 14 points below Thursday's low to 17,689.68 before rebounding to 17,807 down 66 points or 0.37% on the day. The Nasdaq also made a lower low before rebounding and closing mid-range for the day at 4942.52, gaining 9 points or + 0.18% for the week.

The Transportation Average found support at the 7640 level after the report, almost 90 points of a daily low before closing off 42 points for the week, off 0.54%. The Tranny has been lagging and needs to take out its 50-day moving average at about 7835 in order to give a sound buy signal to the overall market.

The Russell Index was the best performer leading all indexes with a 1.19% rise to 1164.13, a gain of 13.68 points. The Russell 2000 closed above its December 29<sup>th</sup> and 30<sup>th</sup> high of 1160, which was not unimpressive. It is now poised to challenge its December 15 highs at the 1204 level much depending on the annual rebalancing. The Russell rebalancing preliminary list will be known in about a week and the final list is known a week later with a trade date of the last Friday in June. This is usually the biggest trading day of the year. The purpose of the rebalance is to keep the better stocks..

Volatility continued to decline. The VXX ( \$ 13.02 ) - \$ 0.94 or down 6.7% last week after dropping \$ 1.51 or 10% the week before. The VXX peaked at 30.85 on February 11<sup>th</sup> when the Dow visited its yearly lows at 15,503. The best trade on the board has been being short the Ultra VIX triple volatility index ( UVXY: \$ 9.99 ) down 1.50 after - 2.65 or 19.6% the previous week, has been in a huge downtrend from Feb 11<sup>th</sup> when it reached 61.92. The S&P continues to look decent on the charts.

The markets continue to be dogged by election uncertainty. If the results of the FBI investigation were to be made public in June and the outcome was sufficiently damaging to Secretary Clinton where it suddenly became likely that she would have to withdraw from the race, this would be unsettling for financial markets. The FBI investigation is likely to be known before the Democratic convention at the end of July.

U.S. Exports rose in April to their high for the year. The strong dollar is fading. Exports of goods and services increased 1.5% to a seasonally adjusted \$ 182.8 billion in April. The greenback's rise in value against other currencies since mid-2014 made U.S. products expensive. The dollar peaked in January.

**This chart of the July Silver** on a daily basis has held its support at the all- important \$16.00 level and on a short term basis can rally back to resistance at the \$16.60-16.75 level. The options purchased on Thursday were SLV 6/15 Calls, and we have already taken a profit from \$ .38 to \$ .69 on the first half on Friday. The point of this trade is not to play for \$ .25 or .30, but to be in position if we move back to the resistance closer to \$17.00, which would correspond to a price for our ETF of around \$16.50-.75. The value of our second half position would be in the neighborhood of \$1.50, and if I am wrong, we have already taken back.....**CAM**

## **Market Strategies Economic Data**

**The May Employment Situation Report** was a huge disappointment as an increase of 164,000 jobs had been expected. Instead it turned out to be the worst jobs report since September 2010. The Verizon strike was a major contributor to the miserable jobs report which cost about 34,000 jobs. The Unemployment rate was 4.7% (Briefing.com consensus 4.9%) versus 5.0% in April. The March and April downward revisions added 59,000 unemployed. Also disturbing was a drop in the labor force participation rate which fell to 62.6% in May from 62.8% in April.

Nonfarm payrolls increased by 38,000 (Briefing.com consensus 155,000). Over the past three months, job gains had averaged 116,000. April nonfarm payrolls were revised lowered to 123,000 from 160,000. March nonfarm payrolls were revised down to 186,000 from 208,000.

Private sector payrolls increased by 25,000 (Briefing.com consensus 160,000). However, previous months were also revised much lower. April private sector payrolls were revised to 130,000 from 171,000. March private sector payrolls were revised to 167,000 from 184,000.

The May Employment Situation report will give the Federal Open Market Committee an incentive to hold off on a rate hike at the Mid-June meeting.

Briefing.com

Source: Bureau of Labor Statistics; updated 06/03/16

Briefing.com

**The Balance of Trade deficit** widened to \$37.4 billion in April from an upwardly revised \$35.5 billion (from -\$40.4 billion previously reported) in March. That was better than the Briefing.com consensus estimate, which called for the deficit to be \$41.6 billion.

The widening in the deficit between April and March was the result of imports increasing by \$4.5 billion over March to \$220.2 billion and exports increasing by only \$2.6 billion to \$182.8 billion.

It is encouraging to see a pickup in both imports and exports; moreover, the demand pickup for goods was broad-based in both instances.

The real goods deficit increased \$1.5 billion to \$57.6 billion, yet this will still compute favorably in Q2 GDP forecasts since it is below the first quarter average of \$60.5 billion.

Exports and imports of goods and services for all months through March 2016 were revised with this report to incorporate annual revisions to the goods and services series; hence, the notable deviation from the consensus estimate and the notable revision for the March report.

Briefing.com

New orders for manufactured goods increased 1.9% in April (Briefing.com consensus +1.6%) on top of an upwardly revised 1.7% increase for March (from 1.1%).

Shipments also increased for the second straight month, rising 0.5% after increasing 0.3% in March. Shipments of nondefense capital goods excluding aircraft -- a metric used in the GDP computation -- increased 0.4% after a downwardly revised 0.0% reading for March (from +0.5%).

Orders for durable goods jumped 3.4%, bolstered by a 65.3% increase in orders for nondefense aircraft and parts. Orders for nondurable goods increased 0.4%.

Category	APR	MAR	FEB	JAN	DEC
Factory Orders	1.9%	1.7%	-1.9%	0.9%	-2.4%
Less Defense	2.1%	0.5%	-1.4%	0.7%	-1.4%
Durable Goods	3.4%	2.0%	-3.3%	3.7%	-3.9%
Nondurable Goods	0.4%	1.4%	-0.4%	-1.9%	-0.9%
Unfilled Factory Orders	0.6%	0.0%	-0.5%	0.0%	-0.4%
Factory Shipments	0.5%	0.3%	-0.6%	-0.1%	-1.5%
Factory Inventories	-0.1%	-0.1%	-0.4%	-0.3%	-0.2%
Inventory/Shipment Ratio	1.36	1.37	1.37	1.37	1.37

The latest report marked the first time that factory orders have increased in back-to-back months since June-July 2014.

## Market Strategies Cycles

With the first five months of 2016 officially in the record books the Stock Trader's Almanac updated their 1-Year Seasonal Pattern Charts of Eighth Years, Election Years and 2016 year-to-date below. DJIA's chart also includes Incumbent Party Wins and Losses and years when No Sitting President was running. The key takeaways from these charts are the market generally performs better when the incumbent party wins and there have only been two losses in the last seven months of election years since 1952. This second point is not as easy to see as steep losses in 2008 have a sizable impact on the charts. Nonetheless, the market does frequently make a bottom in May and rally to finish the election year.

As of the market's close yesterday, both the faster and slower moving MACD indicators applied to NASDAQ were positive. With NASDAQ's modest gain today, a one-day decline of over 6.6% (about 330 points) would be needed to turn NASDAQ's MACD Sell indicator negative.

Although the “Best Six Months” for DJIA and S&P 500 have officially come to an end, NASDAQ’s “Best Eight Months” (November through June) is still in progress. As of the market’s close yesterday, both the faster and slower moving MACD indicators applied to NASDAQ were positive. With NASDAQ’s modest gain today, a one-day decline of over 6.6% (about 330 points) would be needed to turn NASDAQ’s MACD Sell indicator negative. When NASDAQ’s MACD Sell indicator becomes negative, the STA will issue their NASDAQ Seasonal MACD Sell signal and begin clearing out remaining technology and small-cap positions held in the Almanac Investor ETF Portfolio.

### June/July Sector Seasonality’s

June and July tend to offer only less high-probability seasonal trading opportunities in typical years. As a result, there are just three seasonal sector setups in the *Stock Trader’s Almanac 2016* for June and July. The first takes advantage of seasonal weakness by natural gas stocks beginning in mid-June through the end of July. This trade is based upon the NYSE ARCA Natural Gas index (XNG). Unlike last year, XNG has been in an uptrend since its double bottom in January and February and is setting up nicely for a possible short trade.

**First Trust ISE-Revere Natural Gas (FCG)**, or the UNG, a current long holding in most of our portfolios and recommended many times in previous letters has made a solid move higher over the past couple weeks. However, the rally could be coming to an end in Mid-June. We would be ready to take profits. The FCG appears to be losing some steam. For tracking purposes it will be closed out of the STA portfolio using its average price on June 3. FCG could be shorted near resistance around \$25.35-55 or on a breakdown below \$22.45 with corresponding negative MACD, Stochastic and relative strength indications. If shorted, set an initial stop at \$25.95.

Natural Gas prices have trended higher after being extremely oversold. Pipeline and liquid natural gas exports are steadily improving, and there is less competition from the coal industry which has been in liquidation. While getting seasonally overbought, prices will be much higher later in the year. August is usually the best time to be getting long.

# JUNE 2016

### **Undervalued Small Cap Stocks**

**Lower Priced stocks that look to be a buy:**

**Repro-Med Systems, Inc ( OTCQX: REPR 0.35 )\***

Fourth quarter preliminary net revenues will exceed \$3.2 million, representing a slight increase over the \$3.1 million of the previous quarter. Sales are led by the Company's proprietary infusion products. The Company's fiscal year ended February 29, 2016.

This month the Company participated in the 25th Annual National Home Infusion Association (NHIA) Conference and Expo in New Orleans, LA and used the occasion to introduce its new "On-Line Calculator", a tool to help determine which of the Company's Precision Flow Rate Tubing™ and RMS HlgH-Flo Subcutaneous Needle Sets™ to use based on the medication being administered and desired time of infusion.

RMS Medical Products was one of 110 exhibitors in attendance at NHIA. Customers responded well to the new calculator and expressed that the new format of the "On-Line Calculator", which can be used on any computer, tablet, or mobile device, was easy to use and very helpful. The marketing and sales teams continue to build new relationships and expand the Company's customer base as evidenced by continued strong sales.

Andy Sealfon, Company President and CEO commented, "The military has expressed interest in our products for utilization in emergency applications as well as use in VA hospitals. We believe that because of our performance standards and the reliability of our products, we will provide them with great value and benefits."

The Company manufactures medical products used for infusions and suctioning. The Infusion product portfolio currently includes the FREEDOM60<sup>(R)</sup> and the newer FreedomEdge™ Syringe Infusion Pumps, RMS Precision Flow Rate Tubing<sup>(TM)</sup> and RMS HlgH-Flo<sup>(TM)</sup> Subcutaneous Safety Needle Sets. These devices are used for infusions administered in professional healthcare settings as well as at home. The Company's RES-Q-VAC line of medical suctioning products is used by emergency medical service providers in addition to a variety of other healthcare providers.

NHIA is a trade association representing the interests of entities providing infusion and specialty pharmacy products and services to home-based infusion patients.

The Company's website is [RMSMedicalProducts.com](http://RMSMedicalProducts.com).

Repro-Med Systems, Inc has had an increase in sales each of the last four years. They finished the year of 2014 with \$ 11.2 million in sales reflecting top line growth of 29% from 2013. In each of the previous two years they had a 12% increase in sales. The company has had at least \$ 700 thousand of net income in each of the past four years and has no debt. The patented needle sets alone can give the company a huge growth potential. In my opinion, with new products coming on stream, the stock should trade between \$ 3 and \$ 8 in the next two years.

## **Oakridge Global Energy Solutions, Inc. (OTCQB:OGES 0.58) \***

Oakridge global energy is a developer, designer and manufacturer of proprietary energy storage solutions. The Company is based out of Florida's "space coast" near Kennedy Space Center. They make premium quality, proprietary batteries, battery systems and lithium ion cells that are built for maximum performance over the traditional lead/acid batteries. OGES, proudly manufacturing in America since 1986, produces batteries for military, consumer, government, and industrial applications. Target market priorities include golf cars and other recreational vehicles, electronics, and devices requiring rechargeable batteries.

Oakridge Energy produces highly reliable, sustainable and dependable batteries for mobile power sources. Based on size and weight, OGES products deliver a higher capacity than comparable competitor batteries. OGES batteries are higher in quality, longer lasting and safer to use. These batteries have undergone and passed rigorous military testing in underwater and aerial vehicles proving to be high/low pressure tolerant. Most significant, OGES batteries are superior performing yet competitive in the market.

Martac Maritime Tactical Systems, Inc., MARTAC recently conducted very successful field trials on the Inter-coastal waterway in Palm Bay, Florida. MARTAC is a Melbourne, Florida based company that designs and produces the Man-Portable Tactical Autonomous Systems (MANTAS) that can reach extreme high speeds and operate anywhere in the world. These vehicles are designed to be used in numerous applications including naval fleet protection, mine warfare, port and harbor security patrol, antipiracy, search and rescue, and many others. shows our high quality and high performance gets us into the military space at a time when made in USA is of critical strategic importance.

Freedom Trucks shows that Oakridge can outperform Tesla and the "Tesla of trucks" - trucks are much more difficult and laborious to power than cars - because of the Oakridge high power high energy dense batteries, we need only 180 OGES batteries to power the interstate truck that pulls an 80,000 lb trailer, whereas it would take 208,000 Tesla/Panasonic batteries, which is simply not feasible.

Lithium ion batteries, deliver twice the energy of nickel cadmium batteries and are the fastest growing battery segment. Their growth and demand dynamically forward trending. They are lightweight and easy to maintain. They deliver superior electro-chemical output and provide highest energy density for weight, non-metallic and are rechargeable. In 2015, the OGES Pro Series golf car was launched at the annual PGA show, the largest golf show in the world. OGES plans to have a new factory producing its patented thin film solid state lithium ion batteries by 2017. OGES is commencing delivery of small format prismatic to help several smart card customers reach the next generation. Their growth will be serviced by the new factory. These batteries are also in a rapidly growing demand for a variety of applications.

Oakridge has recently continued expansion of its ISO certified manufacturing facility and warehouse in Palm Bay, with the support of Florida Governor Rick Scott. The new facility represents a \$270 million investment, increasing the size of the manufacturing plant to 70,000 sq ft to accommodate the growing demand for OGES batteries. Production is expected to increase from 250,000 to 25 million cells per year by 2018. The company's growth will provide 1000 Americans with new jobs; this is part of the company's commitment to support domestic employment. Overseas, Oakridge Global Energy Solutions Limited (Hong Kong) is a subsidiary company that operates for sales and service in Asia.

**Pluristem Therapeutics** ( Nasdaq : PSTI: \$ 1.58 ) is a leading developer of patented placenta-based cell therapy products through its ( Placental expanded ) platform. In 2016 PLX cells will enter pivotal trials aimed at marketing approval in two indications serving multi-billion dollar markets. Positive clinical trial data for the cells have been reported in multiple indications. PLC cells release a cocktail of therapeutic proteins in response to inflammation, ischemia, hematological disorders and radiation damage. The

Company's proprietary, three - dimensional expansion technology is used to grow the cells in mass quantities with batch-to-batch consistency at Pluristem's FDA and EMA approved state-of-the-art manufacturing facility. The cells do not require tissue matching prior to administration, making the treatment cost effective and readily available in virtually any medical setting. Pluristem has a strong intellectual property position, GMP-certified manufacturing facilities, strong balance sheet and strategic relationships with major research institutions.

Japan's Patent Office just granted Pluristem two key patents, which cover: 1) Pluristem's core technology of three-dimensional expansion methods for producing therapeutic cell products derived from placental or fat cells; 2) the use of placenta-derived cell products grown with this 3D technology to treat disorders of the hematopoietic system\* (see below for a bit of detail), such as disorders caused by exposure to radiation or chemotherapy, and failed engraftment of hematopoietic stem cell transplants. Pluristem continues to strengthen its IP position in order to support the current negotiations with pharmaceutical companies in Japan regarding potential partnerships for the development and commercialization of its Placental expanded (PLX) cells.

Key to their activities in Japan, and as is described on the fact sheet, is that Pluristem received clearance for the protocol for a Phase 2 trial in critical limb ischemia targeting marketing approval in Japan, via Japan's accelerated regulatory pathway for regenerative medicines. Having been accepted into that pathway, Pluristem is able to apply for conditional marketing approval after a single successful phase 2 study. If the Phase 2 results are positive and PLX-R18 gets approved on the basis of those data, they will not need to spend the years and millions of dollars on Phase 3 trials, but will have to collect "real world" data on patients who have been prescribed the drug to treat critical limb ischemia, once it hits the market. In any case, acquiring IP for all placenta-derived cell therapies is crucial to activities there, as is protection of Pluristem's 3D manufacturing methods.

**Gold Mining USA OTC: GMUI ( 0.03 )** Has both mining activities in Australia and the U.S. Gold Mining USA Inc is an emerging natural resources company focused on developing metallurgical and mining projects. The Company's business model is to acquire projects with the potential to provide significant resources through exploratory drilling and generate value through their development, joint venture or divestment. GMUI has a team of experts who will manage all mining operations available on their website. In addition GMUI has an Offtake Agreement with a prestigious Swiss-based Gold buyer and Refiner to purchase its gold production at the spot price at the London Bullion Market ( LBMA ) on the day gold is collected.

**GMUI Strategy:** The company uses strict investment criteria for project acquisitions and focuses on available tenements in proximity to operating mines, or in areas with proven or potential in-ground resources in regions suitable for short-term development. Projects are selected based upon historical drilling or sampling results combined with robust geological mining concepts and financial models. The projects are explored, analyzed and where required, brought into compliance to JORC/NI 43-101.

**Australia and Nevada** provide the opportunities to exploit smaller, undeveloped or previously mined gold resources that are of no interest to the large mining companies. In addition, there are numerous small hard rock and alluvial gold mines which have viable gold resources but are unable to raise the funds to start up or continue operations.

**An initial target** acquisition, Mt Tynm, provides an opportunity to enter the gold mining arena in Australia on a small scale with the confidence of total outlay recovery and good profits, sufficient to expand operations by acquisition of similar nearby deposits to continue positive cash flow mining and commence an exploration program capable of even greater rewards.

**Mt Tymn** is located approximately 125kms southwest of Darwin, 1km east of the Stuart Highway and 18kms south of the Adelaide River. As part of this acquisition, GMUI will also own the MLs relating to Ringwood which is situated approximately 120 kms southeast of Darwin, in the Pine Creek area. The minimum gold resource at Mt Tymn is conservatively estimated at 227,000 ounces with large potential for further drilling and assessment. Gross revenue is estimated to be in excess of \$ 300 million with a gross profit expected to exceed 45%.

## **Fundamental Analysis Stocks To Buy with Stops**

Using fundamentals the following are stocks to buy and they have done well.

The table is hypothetical. We have taken numerous profits as indicated on the table below.

Kroger ( KR: \$ 36.25 ) was bought at \$ 35.71.

We missed the HOG which only got to \$ 45.06 If you are long place a stop loss at \$ 43 as it went above its 13-day m.a.

Buy Enzo Biochem with a 40 cents risk.

The Russell rebalancing could be interesting for ENZ. The HDGE is not set up for a trade.

It would be a buy if the market fails to make new highs on this move.

It might be bought at 10.10 with stop protection at 9.80.

The HDGE goes Up when the market goes Down. It is a good hedge against long positions. We missed the Flushing Financial as it did not reach our theoretical buy limit.

#### **Rule 17B Attestations and Disclaimers**

Princeton Research, Inc. has approximately 2,581,578 shares of AIVN both free and restricted and represents them for Investor relations. Princeton also has about 40,000 shares of TXGE. Princeton is paid \$ 1,500 per month from RMS Medical Products. Princeton has bought 81,100 shares of RMS Medical Products. Princeton was paid \$ 2,500 to write a report on Xinerdy. Princeton has signed a contract with CBLI to be paid \$ 2500 for July and August for investor relations. Princeton has been engaged by Target Energy. No contract is currently in place. Princeton was paid about 500,000 restricted shares of Leo Motors.

When there is no movement in penny stocks, even though there is none or very small losses, we will liquidate ( sold AIVN on stop ) even though we like the company, if money is needed for better opportunities.

We now believe REPR represents upside opportunity. The Target ADR trades at about \$ 4.50 in U.S. vs 0.05 in Australia. Princeton owns 400,000 Australia shares and about 900 U.S. ADR's.

Pursuant to the provisions of Rule 206 (4) of the Investment Advisers Act of 1940, readers should recognize that not all recommendations made in the future will be profitable or will equal the performance of any recommendations referred to in this e-mail issue. Princeton may buy or sell its free-trading shares in companies it represents at any time.
