Charles Moskowitz Discussion

We have 1 open long position:

FB August 28th 93 Calls

Funds in Use \$ 712

CHINA, and THE HEIGHT OF BEWILDERMENT

Week 34 was certainly not one for the faint of heart. While we had a small loss of \$434 it was mainly due to the liquidation of our SPY calls on Tuesday and Wednesday at the open. I'd like to take credit for the timing but I knew I wasn't going to be able to watch the markets and sold out just to not have to worry about a downturn.

Our YTD was down for the first week this month to \$7415 and I didn't liquidate the FB calls on the 50% Down Rule since I would have just re-bought them on Monday and want to avoid any wash sale restriction.

So, what was all this about? For several weeks I have been sounding the alarm to be cautious but I didn't expect the kind of selloff we encountered. I don't believe anyone (and I've been involved for over 45 years) has seen this kind of unrelenting selling with the S&P500 down 6% in a week. The crushing of Oil and Copper sent some very powerful messages. The flight to the safety of the 10 year treasuries confirms those messages.

The slowdown in China has everyone worried, but the height of bewilderment appears in the A.A.I.I. numbers in which both Bullish and Bearish totals were down. I actually don't remember that happening anytime. Bearish is about 10% over its historic average, Bullish is 33% below its average and Neutral is a whopping 39.8 vs. its average of 31. Clearly the public is totally frozen out of the decision making process.

So, what do we do now? I strongly suspect we will have a tradable rally off this general area. I would however not expect a "V" bottom since there has been more significant technical damage done than in the prior "almost corrections." There are several stocks and ETFs to watch for upside. FB, DIS, either CYBR or FTNT or the HACK ETF are all on my radar. As I mentioned above, I didn't sell the FB 8/28 (this coming Friday) 93 calls since we could have overnight action by the Chinese or premarket actions out of the EU that may cause an up open and I would want to rebuy them anyway.

If you want to participate without the global exposure, try some calls on the Russell, since it has less of an international exposure.....but as discussed last week, options, with their limited risk is the only way to go.

...*CAM*

For those of you who do not buy puts to protect your portfolio, there are many ETF's that are the inverse of the DOW. The symbols are **DOG, DXD, SDS, TZA and RWM**, which go up when the DOW, S&P 500 and Russell 2000 go down and down when they go up. The DZZ goes up double when gold goes down.

Market Strategies \$100,000 Trading Account

There were five closed long option positions;
The SPY Sept 210 Calls were profitable making \$ 1560.

There were also four losing positions:

SNSS Calls expired worthless posting a loss of \$ 1120.
HACK Aug 31 Calls
Balance of the DIS Aug 107 Calls and the
MOS Sept 45 Calls were all stopped out on the 50% Loss Rule.

The total loss for the week in options trading was \$ 868.

There was one closed out stock position, 200 shares of the ETSY sold at \$ 17.21 for a profit of \$ 464.

For the full year to date, we have gains of \$ 22,018.

Open position losses decreased to \$ 16,187.

The options expire on the third Friday of each Month unless otherwise posted.

The Stock table has the following 18 positions:

AA, ARRY, BAC.B.WS, BSBR, CRM, DSX, FCX, GILD, MOS,
NAT NBG (3), REPR, RPTP, SAN, SNSS, TEXQY:

The options call for a \$ 2,500 investment unless otherwise stated; each stock position requires \$5,000 unless otherwise mentioned specifically.

We are basing money management on a hypothetical
\$ 100,000 and are using a total of \$62,860 for the 18 open stock positions.
There is one long option position requiring \$ 1,424 totaling \$ 64,284, leaving \$ 35,716 in cash.

These figures are approximate and there might be errors.

We have not counted the dividends received from Apple, JP Morgan, North American Tankers, Santander, Blue Capital Reinsurance which was sold for a profit and many others.

Executions that have occurred at or near the open or close of trading sometimes vary from our actual numbers. For example, when something opens down and it is through our price, we take the next

trade whether it is an uptick or continues lower. This sometimes results in a 50% trade that is slightly above or below the exact number.

Previous Week's Recommendations and Rules for the Market Strategies \$100,000 Portfolio Trading Account

- All options count for about \$ 2,500.00 for model portfolio calculations unless otherwise stated
- When the option has doubled sell half the position
- Stop Loss protection is either half or offered with each trade
- The cost of the option is the asking price (or the price between the bid and ask, whichever is more realistic)
- The options will be followed until closed out.
- Option Symbols are stock symbol with expiration month and strike price

Market Strategies Fundamentals

It was without a doubt the worst week of the year for stock markets all over the world. All indexes were much lower. Nasdaq led the selling falling 342 points or 6.8%. The Dow fell 1,017.65 points, down 5.8%, its worst week and month since August 2011. The S&P 500 lost 121 points or 5.77%, while the Transportation Index fell 447 points or 5.37%. The Russell 2000 lost 56 points or 4.61% to 1156.79. These are the worst losses since the Ebola crisis of October 2014. Stocks were just trading at too high a level and due for a setback.

The good news is that stock valuations now are more reasonable and opportunities abound. The S&P which tumbled to 1971 in the five sessions last week, now trades for 17 times projected 2015 operating profits of \$ 118. The S&P earnings yield is 6%, triple the 2.05% yield on the 10-year Treasury. The S&P 500 dividend yield of 2.2% exceeds the Treasury yield. In the current low interest rate environment, stocks remain the favored asset class. As you can see, the stocks that are really getting crushed are those with high multiples.

China's Caixin Manufacturing PMI disappointed market expectations, falling to 47.1 in August from 47.8 in July, which is the eighth consecutive of sub-50 readings, which indicates a contraction in the manufacturing sector. Investors are concerned about Apple (AAPL: \$ 105.76) -\$ 10.20 or 8.8% for the week, possibly losing sales due to the Chinese weakness. China is Apple's second largest market. Apple shares have fallen from a high of \$ 130.75 reached July 21st, down 25 points or 19% in a month. Apple now trades at just 11.6x projected earnings of \$9/share for its current fiscal year ending in September. The PE is just 9 and they have \$ 150 Billion in Cash.

Energy stocks accelerated to the downside. With oil at \$ 40/bbl investors fear that dividends are at risk. Chevron (CVX: \$ 75.76) now yields 5.7%. The stock has dropped \$ 18/ share in just a month from July 21st or 19%. For the year it is down from a close of \$ 112.18 on December 31st. ExxonMobil (XOM: \$ 72.13) closed at \$ 92.45 at the end of last year, was down \$ 6.23/share last week or 8%. Exxon pays a dividend of \$ 2.92 or 4% and is not in danger of having to cut. Royal Dutch Shell, the leading European major, was down 8% to \$ 53. Its B shares, whose dividends are not subject to foreign withholding taxes, now yield 7.2%. It has not cut its dividend since the end of World War II. The energy industry is suffering from what has been " overinvestment." The best cure for high prices is HIGH PRICES.

Consumer Spending and overall Retail Sales will benefit from low commodity prices. The Retail Sales ETF (XRT: \$ 91.08) will benefit from low energy and gasoline costs and could be trading at \$ 100 by Thanksgiving. Wal-Mart Stores (WMT: \$ 66.54) and Kohl's (KSS \$ 52.30) are particularly cheap, pay a nice dividend and should be great buys on any continued weakness.

Anthem Inc (ANTM: \$ 146.62) is a buy on any dips to its 200-day moving average at about \$ 141/share with a stop loss at \$ 132. Kroger (KR : \$ 34.93) is a buy on dips with revenue of \$ 108 Bln. Kroger has grown recently to be the nation's # 3 retailer through acquisitions. KR has a presence in most super-markets with a myriad of products. The company owns Ralph's, Fred Meyers and King Soopers among its big-name banners. The company recently acquires Harris Teeter, a Southeast grocery chain for \$ 2.5 billion. The company will end the year substantially higher than its current price level. CVS Health (CVS: \$ 102.21) is a buy on a downside move to its 200-day moving average at 96.50. Stops should be at \$ 88/ share. Virgin America Inc (VA \$ 33.09) is a buy on a dip to \$ 32.50 or lower with a stop loss at \$ 28/ share. VA has a P/E of 7.8 and sales of \$ 1..26 a share with just 43 million shares outstanding.

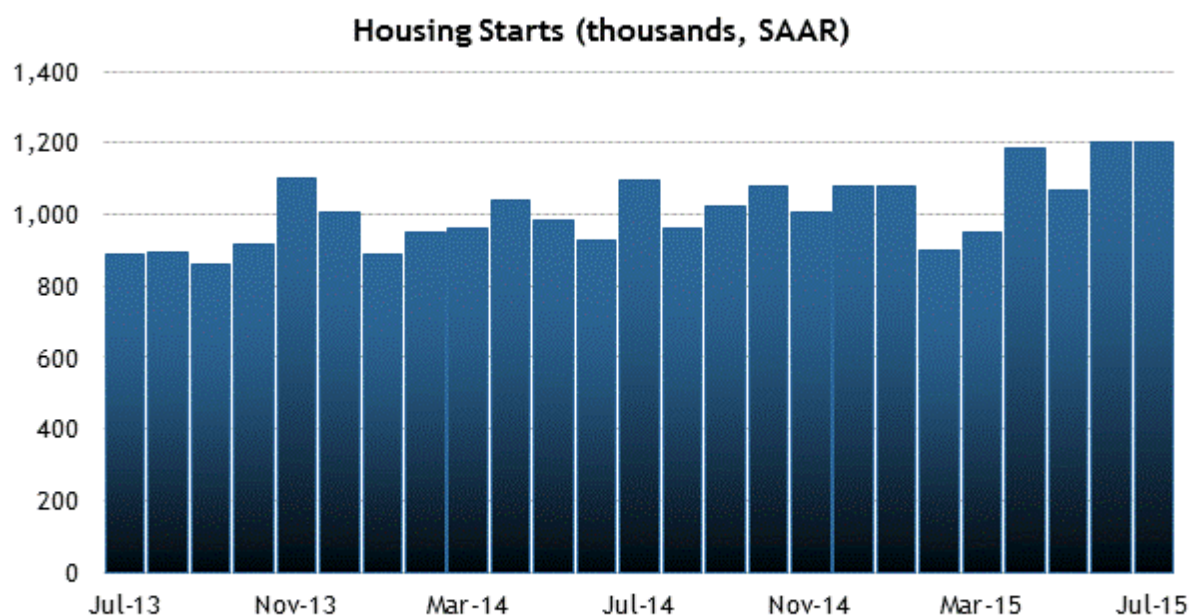

Market Strategies Economic Data

Housing starts in July came in at a seasonally adjusted annual rate of 1.206 million, up 0.2% from an upwardly revised 1.204 million rate (from 1.174 mln) in June. The July figure was pretty much in-line with the Briefing.com consensus estimate, which stood at 1.200 million. Building Permits in July were at a seasonally adjusted annual rate of 1.119 million, which was 16.3% below the revised June rate of 1.337 million (from 1.343 mln) and well below the Briefing.com consensus estimate of 1.257 million. Single-family permits dipped 1.9% to 679,000. Multifamily starts which consist of 2 or more units declined 17% to 424,000.

The big drop in permits is being attributed mainly to the expiration of a tax break for multi-family developers in New York, which put a serious drag on permit applications. Total permits in the Northeast were down 60.2% from June.

Construction trends have recovered following the unusually cold winter and are back on their late 2014 accelerated pace. The number of homes under construction jumped to 908,000 in July from 890,000 in June. Most of the month-over-month increase was led by single-family units, which is a positive consideration for Q3 GDP estimates as construction spending is higher on a per unit basis for single-family homes than it is in the multi-family sector.

Market Strategies Cycles

Stocks got slammed hard in almost record proportions both Thursday and Friday pushing the S&P 500 below the December 2014 lows which is extremely bearish.. The Dog Days are not over for the market. This hazy, hot and sultry time during July and August were named the Dog Days of summer in antiquity by stargazers in the Mediterranean as the time period before and after the conjunction of Sirius, the Dog Star of the constellation Canis Major (Big Dog) and the sun. Back in the day the Dog Days were often plagued with, fever, disease and discomfort.

August is the worst DJIA and S&P 500 month from 1988-2014 with average declines of 1.1% and 0.8% respectively. Last week the Dow lost 1230 points or 7% in one week while the S&P 500 lost 133 points or 6.3%, the worst showing since August 2011. It is also the worst month for NASDAQ down 6.6% in August probably the worst ever in a pre-election year . It is second worst for Russell 2000 (-0.5%) over the same time period. In pre-election years since 1950, Augusts' rankings usually improved. This year the " death cross" the bearish crossing of the 50 through the 200 day moving average proved to be quite bearish. Serious technical damage has been done.

Immune Therapeutics, Inc. (IMUN 0.25) * Buy now. IMUN Naltrexone is an opioid antagonist used primarily in the management of alcohol and opioid dependence; the FDA approved Naltrexone in 1984 at 50mg. However, in much lower doses there is “Accumulating evidence suggests LDN can promote health supporting immune-modulation, which reduces various oncogenic inflammatory autoimmune processes.

The value of Naltrexone as an immune modulator was recognized by Dr. Ian Zagon at the University of Pennsylvania.^{2,3} The late Dr. Bernard Bihari, a Neurophysician from New York, USA (who passed away on May 16th, 2010) began treating his patients in the late 1980s^{4,5}. Since that time, many doctors throughout the United States prescribe LDN for a number of indications including Multiple Sclerosis (MS), Parkinson’s disease, Crohn’s disease, HIV/AIDS, cancer and other autoimmune and inflammatory diseases.

A number of research and clinical trials have been completed and undergone in regards to LDN immunotherapies, with phase I and phase II clinical trials successfully run at a number of universities in the United States and Europe, including Pennsylvania State University Medical School at Hershey; University of Chicago; State University of New York; SUNY Upstate Medical University; London Health Sciences Centre - University Hospital, USA; Alpert Medical School of Brown University; Department of Neurology, San Raffaele Scientific Institute; Division of Rheumatology, St. Louis College of Pharmacy; Department of Internal Medicine, University of Utah; Jondi-Shapoor University of Medical Sciences; Department of Psychiatry & Behavioral Sciences, Duke University Medical Center; and Multiple Sclerosis Center at UCSF⁶. These efforts were pioneered by leading immunologists Dr. Nicholas Plotnikoff, Dr. Ronald Herberman, Dr. Bernard Bihari, Dr. Angus Dalgleish, Dr. Ian S. Zagon, Dr. Jill Smith, Dr. McLaughlin, Dr. Jacqueline McCandless, and Moshe Rogosnitzky, among others.

HOW LDN WORKS

The mechanism of action of naltrexone, in autoimmune diseases and cancer, is still being researched, but there are theories as to the mechanism of action that both explain why LDN works on both autoimmune diseases and cancers, as well as inflammatory disease.

According to Mark J. Donahue’s paper on LDN that uses interviews from Dr. David, Gluck, Dr. Jacquelyn McCandless, Dr. Jarred Younger, and Dr. Ian Zagon:

“LDN is an opioid antagonist that not only blocks the reception of opiates, but also the body’s own endogenous opioids - endorphins. However, because LDN is administered in such a 'low dose' it is believed that LDN only briefly (for 3-4 hours) obstructs the effects of endorphins. Sensing an endorphin deficit, the hypothalamus signals for increased production of endorphins in what is called 'the rebound effect.' The rebound effect results in three things happening:

The study of immune cell glial interactions is in its infancy. Glial cells are the immune cells in your central nervous system (brain, spinal cord). They are very involved in dysregulation of pain systems, neuroinflammation, and some neurological diseases such as Multiple Sclerosis, Alzheimer’s, Parkinson’s disease, Autism, ALS, infections of the brain.

LDN has treated Crohn’s Disease, HIV/Aids, Multiple Sclerosis, Autism, Fibromyalgia, Prostate Cancer, Hepatoblastoma, Gastrointestinal Disorders, Melanoma, Gulf War Syndrome , based on clinical studies and patient data.

Enzo Biochem (ENZ 2.93) Buy on a dip to below \$ 2.80.. The company has revenue of about \$ 100 million per year. This pressure has been against the stock since May and now may be ending. I would expect the stock to start to recover to much higher levels. When Ampiprobe is approved the top line revenue should start to show a increase within 3-4 months of approval (product rollout, packaging, etc..). Enzo should be included in the Russell next year if all of this comes to pass. Upside pressure is likely for the stock.

RMS Medical Systems, Inc (REPR 0..30)* . The company is poised for world-wide growth. The Freedom 60 is being marketed in Europe as well as gaining a footing among home-care professionals in America. International sales increased 47.8% first quarter 2015 up from same quarter 2014. U.S. sales were down 10%. Some of the First Quarter Sales were completed in the previous quarter. The RescueVac is used in ambulances and planes for emergency suction.

Stocks and ETF's bought over the past few weeks

The HDGE has finally accelerated above 11.04 which is a bear signal and an opportunity to make money while the markets are plummeting. We bought the HDGE @ 11.04. HDGE is the BEAR hedge. We were unable to buy Golar. We bought Mosaic MOS and were stopped out. We want to buy Southwest Air (LUV) and Harley Davidson (HOG). We would also like to be long Virgin Air (VA) on a dip. Please check on the previous weekly market letters if there are questions. We are long in Diana Shipping at 6.60. DSX is looking better and you should buy now if not already long. We would buy Bank of America and continue to like the banking sector.

Symbol	Name	Business Description	PE	P/S	MV mln	Price	Buy Limit	Stop Loss Or sold

Rule 17B Attestations and Disclaimers

Princeton Research, Inc. has approximately 2,581,578 shares of AIVN both free and restricted and represents them for Investor relations. Princeton also has about 40,000 shares of TXGE. Princeton is paid \$ 1,500 per month from RMS Medical Products. Princeton has bought 81,100 shares of RMS Medical Products. Princeton was paid \$ 2,500 to write a report on Xinery. Princeton has signed a contract with CBLI to be paid \$ 2500 for July and August for investor relations. Princeton has been engaged by Target Energy. No contract is currently in place. Princeton was paid about 500,000 restricted shares of Leo Motors.

When there is no movement in penny stocks, even though there is none or very small losses, we will liquidate (sold AIVN on stop) even though we like the company, if money is needed for better opportunities.

We now believe REPR represents upside opportunity. The Target ADR trades at about \$ 4.50 in U.S. vs 0.05 in Australia. Princeton owns 400,000 Australia shares and about 900 U.S. ADR's.

Pursuant to the provisions of Rule 206 (4) of the Investment Advisers Act of 1940, readers should recognize that not all recommendations made in the future will be profitable or will equal the performance of any recommendations referred to in this e-mail issue. Princeton may buy or sell its free-trading shares in companies it represents at any time.
