### **\$10,000 Trading Portfolio Charles Moskowitz Discussion**

**There are No Open Positions**

**Funds in use = \$0**

The issue concerns me because in my own experience, I have found that I am often prompted to open FB by emails that tell me that I have “new notifications” waiting, only to find that they are either announcements I have already opened or a note that says, “a lot has happened since you last signed on.” This means that they are counting my visits that would not have occurred had I not received these emails. It also sends me prompts that I have been tagged in a photo, when in reality it is a response from a friend of a friend who has commented about a post...again I open the account and get counted.

The company and stock have a cult following, and I’m sure that my comments will fall on deaf ears, but frankly, it represents another stock priced for perfection and if another set of numbers comes under question it will be a bigger problem. Like Tesla or NFLX or TWTR, you can love the product and get hurt in the stock.

As noted in the Market Lab on page 3, the A.A.I.I. sentiment numbers are getting back to absurdly low for the bulls again. Several months ago we were back down below 20 for 2 weeks and that was a level seen something like only a handful of times over the last many decades. These kind of readings are not indicative of a market topping out. We are only 24.8% bulls which means that over 75% of those polled are at best neutral and at worst negative the market. I believe that many are finally beginning to understand and be concerned with the world’s biggest governments racing to the bottom of the valuations of their currencies. The need to own some portion of your portfolio in precious metals is paramount. While we own HL, I am looking for a way to own some GLD or some individual miners. Watch the texting service for new trades. **CAM**

### **Market Strategies \$10,000 Trading Account Trade Table**

| <b>Date</b> | <b>Trade</b>                                  | <b>Price</b> | <b>Cost</b> | <b>Proceeds</b> | <b>Profit or Loss</b> |

| REPR* 5000 | 0.22           | 10/22/12      |           |                 |                |

**Recommendations will be both listed in this letter and texted to members.**

**Previous closed out stock and option positions can be found in past Market Strategies Newsletter issues available in the VIP Subscribers Members Area.**

For those of you who do not buy puts to protect your portfolio, there are many ETF's that are the inverse of the DOW. The symbols are **DOG, DXD, SDS,TZA and RWM**, which go up when the DOW, S&P 500 and Russell 2000 go **down and down when they go up. The DZZ goes up double when gold goes down.**

### **Market Strategies \$100,000 Trading Account**

There were six closed out option positions: They are all listed below.

The Net loss for the week in options trading was \$ 208.

The 300 Sunoco shares were sold at \$ 29.72 making a gain of \$ 66.

The options having been sold against them made a gain of \$ 900.

For the entire year on closed out trades, our hypothetical profits decreased by \$ 142 to \$20,214.

The options expire on the third Friday of each Month unless otherwise posted.

The Stock table has the following positions: AA ( 2 ), EYES ( 2 ), FAST, HL, MOS( 2 ), NBGGY, REPR, SAM, SAN, SCO, SPXU (2), EXQY, TWTR

The options call for a \$ 2,500 investment unless otherwise stated; each stock position requires \$5,000 unless otherwise mentioned specifically.

The money management is based on a hypothetical \$ 100,000.

We are using a total of \$65,310 for the 17 open long stock positions.

There are no Open Option Positions. The stock positions require \$65,310 which leaves \$ 34,690 in cash.

Open position losses decreased by \$ 1,173 to a negative \$ 11,840.

These figures are approximate and there might be errors.

We have not counted the dividends received from many previous trades such as Apple, Colgate Palmolive, JP Morgan, Mosaic, North American Tankers, STNG, Santander, which pays over 5%, their Brazil affiliate BSBR and Blue Capital Reinsurance which was sold for a profit and many others.

The trading is hypothetical and we do not count commission costs.

Executions that have occurred at or near the open or close of trading sometimes vary from our actual numbers. For example, when something opens down and it is through our price, we take the next trade whether it is an uptick or continues lower. This sometimes results in a 50% trade that is slightly above or below the exact number.

### **Previous Week's Recommendations and Rules for the Market Strategies \$100,000 Portfolio Trading Account**

- All options count for about \$ 2,500.00 for model portfolio calculations unless otherwise stated
- When the option has doubled sell half the position
- Stop Loss protection is either half or offered with each trade
- The cost of the option is the asking price (or the price between the bid and ask, whichever is more realistic)
- The options will be followed until closed out.

- Option Symbols are stock symbol with expiration month and strike price

| Option                                   | Cost          | Date     | Sold | Date       | Profit/<br>(Loss) |

## **Market Strategies Fundamentals**

The stock market registered its second consecutive weekly gain led by the NASDAQ which made a new all-time high at 5342.88 before closing at 5305.75, a gain of 61.18 or + 1.12% for the week. The S&P 500 gained 25.53 points to 2164.69, but was unable to hold above its 50-day price moving average. Thanks to the rally, the index is back to little changed for the month of September down 5.26 points or - 0.3%. The Dow gained back 137.65 points or + 0.76% for the week, to be down just 0.075% for the month. The Russell gained 29.84 points or + 2% to 1254.62, a new high for the year and just 41 points below its all-time high at 1296.

The unquestionable leader of the markets the past week was again the DJ Transportation Index which gained 167 points or + 2.14%, a mirror image weekly reversal. The Tranny closed above both its 13 and 50 day price moving averages and impressively reached above the 8,000 level mid - week. It was unquestionably surprising to watch the strength in this index with lower demand for oil and natural resources as well as beleaguered transportation prices on both railroads and airways. It was all Federal Express, which had a huge upside surprise with both top and bottom line beats.

The Fed-induced rally in the market was broad-based as most sectors gained substantially for the week and could afford the huge set-back on Friday. Rate-sensitive sectors like real estate and utilities both advanced more than 3.0% for the week while energy (+0.1%) and technology (+0.4%) were the only two that failed to climb more than 1.0%. The underperformance in the technology sector masked a 20.0%+ spike in the shares of **Twitter** (TWTR) after **CNBC** reported that **Salesforce** (CRM) and **Alphabet** (GOOG) have expressed interest in the social media site.

Federal Reserve Chair Janet Yellen discussed the FOMC decision, suggesting that a rate hike could take place in December. However, rate hike expectations, as expressed by the fed funds futures market, did not change much from last week. In fact, they receded a bit as the implied likelihood of a December hike ticked down to 54.2% from 55.5% at the end of last week.

| Index               | Started Week | Ended Week | Change | % Change | YTD % |
|---------------------|--------------|------------|--------|----------|-------|
| <b>DJIA</b>         | 18123.18     | 18261.65   | 138.47 | 0.8      | 4.8   |
| <b>Nasdaq</b>       | 5244.57      | 5305.75    | 61.18  | 1.2      | 6.0   |
| <b>S&amp;P 500</b>  | 2139.11      | 2164.71    | 25.60  | 1.2      | 5.9   |
| <b>Russell 2000</b> | 1223.10      | 1255.11    | 32.01  | 2.6      | 10.5  |

**The US dollar ( DXYO: 95.51 ) -0.53 or minus 0.55% rebounded from the low at 95.00 to close mid-range.** On Wednesday the greenback had rallied above its 200 day moving average to 96.33 but could not hold that level.

**FedEx ( FDX: \$ 174.39 ) + \$ 15.50 or + 9.8% for the week, was** the leader, earned \$ 2.90/ share for the quarter, up 19.8% with a similar revenue gain of 19.5%. Amazon ( AMZN: \$ 805.75 ) + \$ 27.23 or + 3.5% and Alphabet ( GOOG: \$ 786.90 ) + \$ 18.02 or + 2.3% were among the leaders. Boeing ( BA: \$ 131.78 ) + \$ 5.08 or + 4%; United Technologies ( UTX: \$ 102.56 ) up \$ 2.46 or + 2.5%. UnitedHealth Group Inc ( UNH: \$ 140.51 ) + \$2.04 last week after gaining \$ 4.85 the previous week for a two week surge of 5.1% and to new all-time highs.

Central Banks are likely to become much more restrictive. Bank of England Governor Mark Carney has gone so far as to suggest that the path to negative rates was the "wrong" route to take. The Bank of Japan (BoJ) decided at its September meeting to refrain from pushing rates deeper into negative territory. At the same time it unveiled novel stimulus policies, which suggests that sub-zero rates may be going out of fashion.

A consensus has begun to emerge that a world of more active fiscal policy, in which finance ministers take greater charge of economic management. Even in Europe, the idea of deficit spending is becoming less taboo. European Commission President Jean-Claude Juncker is reportedly considering plans to relax and simplify the Stability and Growth Pact, the set of fiscal rules designed to limit spending among EU member countries.

The prospect that debates about the efficacy of monetary stimulus might lead to the punchbowl being taken away has provoked rising market volatility after a period of summer calm. Most top and bottom line numbers are in general, lagging. Investor responses are likely to seek safety.

The first Presidential debate will be a news highlight with markets paying attention. FedSpeak is back in full swing. Chair Yellen testifies on Wednesday before a House committee on bank supervision.

Most investors would prefer to tune this out, but we can no longer avoid it. The polls have tightened. We are on the eve of the first of three Presidential debates. It is expected to attract more viewers than the Super Bowl. Debates are always important, but this time is really special.

Please note that this is not a post with political advocacy. Everyone should vote as they choose, and for whatever reason. That said, this newsletter attempts to provide what is anticipated by markets, and the likely result.

## **Market Strategies Economic Data**

Housing starts in August declined 5.8% from July to a seasonally adjusted annual rate of 1.142 million (Briefing.com consensus 1.186 million). Building permits fell 0.4% from July to a seasonally adjusted annual rate of 1.139 million (Briefing.com consensus 1.160 million) due entirely to a 7.2% decline in permits for multi-unit dwellings.

The downturn in August featured a 6.0% drop in single-family starts to 722,000 and a 5.4% decline in starts for multi-unit dwellings.

The number of units under construction, which factors into GDP forecasts, increased 0.9% to 1.038 million. The third quarter average of 1.034 million is 2.9% above the second quarter average, so this component will factor favorably into the third quarter GDP outlook.

Permits for single-family homes increased 3.7% to 737,000.

The key takeaway from the report is that housing starts continue to be relatively stagnant, which is a bit disappointing when taking into account higher employment and income levels, the persistence of low mortgage rates, and higher levels of builder confidence.

Briefing.com

The Conference Board's Leading Economic Index declined 0.2% in August (Briefing.com consensus +0.1%) on the back of an upwardly revised 0.5% increase (from 0.4%) for July. This was the second time over the last four months that the index has been negative

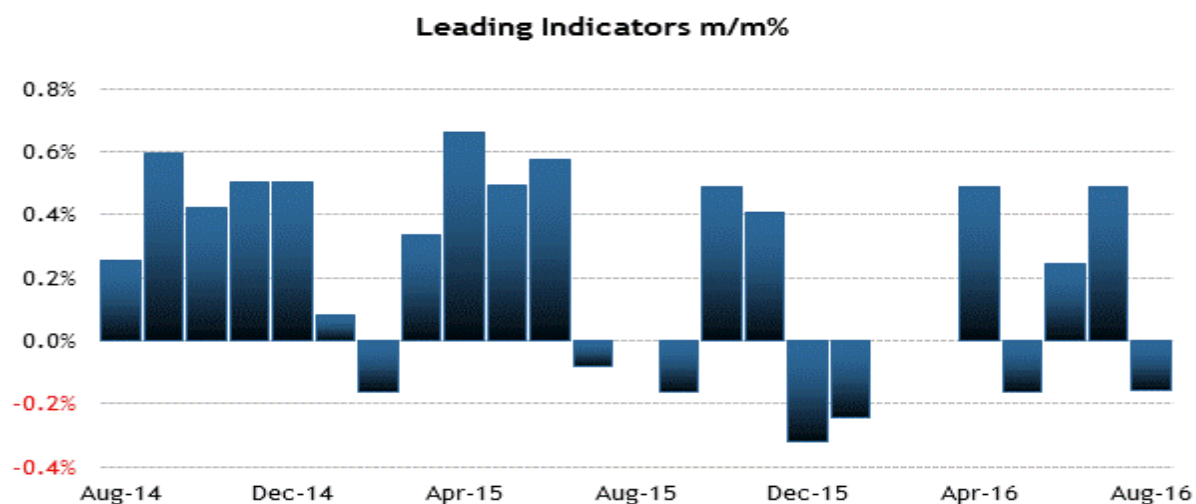

The largest drags on the index in August were average weekly manufacturing hours (-0.13 percentage points) and ISM new orders (-0.13 percentage points) while the largest boosts came from the interest rate spread (+0.13 percentage points) and stock prices (+0.05 percentage points).

Notwithstanding the decline in August, the leading economic index increased 0.9% for the six-month period ending in August versus increasing 0.2% during the previous six months.

The Coincident Economic Index increased 0.1% in August after increasing 0.3% in July. The Lagging Economic Index increased 0.2% in August after increasing 0.2% in July.

The key takeaway from the report is that it reflected the lingering disconnect between Wall Street and Main Street. To wit, positive contributions from the financial components were more than offset by large negative contributions from average weekly manufacturing hours and new orders.

## Market Strategies Cycles

Since the beginning of July, NASDAQ has been the star and its leadership continued last week with another all-time high last Thursday at 5342.88. Although on Friday it declined 37.13 to 5305.75. NASDAQ was up 6.6% in July and 1.1% in August, and as of today's close is up 1.8% so far in September. This is noticeably better than S&P 500 which was up 3.6% in July, down 0.1% in August and is currently down 0.2% for the month. For the month of September so far, these results are better than past election year averages.

Since the beginning of July, NASDAQ has been the star and its leadership is continuing this week with another all-time high close last week. NASDAQ was up 6.6% in July and 1.1% in August, and as of Friday's close is up 1.8% in September. This is noticeably better than S&P 500 which was up 3.6% in July, down 0.1% in August and is currently down 0.2% for the month. For the month of September these results are better than past election year averages, but there is still time remaining. These gains could hold or could just as easily vanish before month's end.

A month plus of sideways trading preceded an early September dip by DJIA, S&P 500 and NASDAQ. This action lead to a slow deterioration of Stochastic, relative strength and MACD indicators applied to all three indices. Strength the first four days last week has reversed that trend and all three technical indicators across all three indices are now positive. Friday was pivotal in providing further confusion as to whether the market has regained traction and can sustain recent positive momentum. The losses on Friday were a very negative sign that confidence may not be returning. Over the last seven Fridays, DJIA

and S&P 500 have closed down. NASDAQ's record is slightly better, but it has been down four of the last six Fridays.

### Select Stocks for the "Best Months"

These 14 stocks all have reasonably solid valuations, healthy revenue and earnings growth, while exhibiting positive price and volume action as well as other constructive technical and chart pattern indications. The group of 14 covers a broad array of sectors and industries. It also runs the gamut of market capitalization with a mix of large caps with more than \$5 billion in market value, midcaps in the \$1-5 billion range, and small caps under \$1 billion.

The Stock Trader's Almanac ( STA ) first sifted through the universe of about 8,000 U.S. traded stocks for those with a market cap of at least \$25 million and average daily volume of 50,000 shares or more on average over the past twenty trading sessions. Then the STA winnowed the list down to only those stocks with relatively low price-to-sales and price-to-earnings ratios. From there the STA found stocks that were exhibiting revenue and earnings growth.

With this list of about 50 stocks the Stock Trader's Almanac dug into each individual company and chart before settling on these final 14 stocks. The underlying theme was to find reasonably priced stocks quietly growing sales and earnings that are flying somewhat under the radar with few on The Street paying close attention to them. As market cap goes higher, this becomes increasingly challenging and a history of earnings surprises becomes even more important.

At the end of the screening process the Stock Trader's Almanac found that homebuilders, technology, medical and financial industries were well represented in the basket. The STA did not search specifically for top-performing stocks within these sectors, this just happens to be where reasonable value and growth currently exist.

This basket is being presented in order to take advantage of the "Best Six Months" (November to April) for stocks. The STA will look to add these 14 stocks, in the table below, on dips. The STA will allocate a hypothetical \$2000 from the cash position in the portfolio to each position. For each stock we have provided the ticker, name, sector, general business description, plus annual sales growth, PE, price-to-sales ratio, market value, a dividend yield and a suggested buy limit and stop loss.

## **Undervalued Small Cap Stocks**

### **Lower Priced stocks that look to be a buy:**

#### **Repro-Med Systems, Inc ( OTCQX: REPR 0.39 )\***

For the quarter ended August 31<sup>st</sup>, net revenues were \$3,147,930 compared with \$3,166,177 in the comparable quarter last year. REPR had strong organic growth both domestically and internationally in the quarter as well as new customer wins, which are expected to continue going forward. Results were masked by the non-recurring contribution from a large clinical trial last year. Net revenues increased in Q2 compared with Q1 of the current fiscal year by 5%.

For the six months ended August 31<sup>st</sup>, net revenues were \$6,138,096, an increase of 5.9% compared with \$5,796,722 for the same period last year, driven by increased sales of infusion products to existing customers as well as the addition of new customers.

For the three months ended August 31<sup>st</sup>, gross profit was \$1,954,592 compared with \$2,006,729 for the same period last year. RMS continues benefiting from lean manufacturing initiatives to streamline operations, which have resulted in increased capacity and decreased direct assembly labor costs, as well as the moratorium on the medical device tax. For the six months ended August 31<sup>st</sup>, the gross profit margin increased 2.6% to 63.4%, up from 60.8% for the same period last year. Gross profit for the six months ended August 31<sup>st</sup> was \$3,891,404 compared with \$3,524,589 for the comparable period.

RMS continues to incur professional fees related to regulatory and litigation and has made significant investment over the last twelve months in its sales, regulatory and operations management to help launch RMS to the next level of growth. As a result, the Company reported for the quarter ended August 31<sup>st</sup>, a net loss of \$82,612, compared to net income of \$335,214 in the same period last year. For the six months ended August 31<sup>st</sup>, net loss was \$315,928 compared with net income of \$270,574.

**Enzo Biochem ( ENZ: \$ 5.13 )** The stock moved from approximately \$5 a share to approximately \$7.00 from May 1 to July. In the last few days Enzo stock has been under heavy pressure. There is nothing fundamental to cause the slide in price. So the business model remains in place and hopefully will add new products over the remainder of the year. They completed the 2016 fiscal year at the end of July and probably had a cash position of some \$65 million and no debt to speak of. When the stock cleared the \$7 level that the Relative Strength Index was over 70 which is overbought. That \$7 number was a 4 year high. The last two days has brought the Index close to 30 which is oversold and we should see a bounce in the stock price this week. (just a guess) We have to remember the Russell Indexes that bought close to 3 million shares in late June also shorted close to a million shares as a hedge. That short position declined by some 300,000 shares from July 1 to July 15.

Over the rest of the year we could see more AmpProbe panels being approved; NIH comments on the Optique trial for Uveitis; positive outcomes in the litigations.

The stock is oversold and the upside opportunity becomes bigger. The fundamentals haven't changed and in fact have become stronger with the latest AmpProbe approval. Enzo has cash of \$50 million and no debt. There are 7 more cases to get settled in Delaware which can provide significant additions to the

cash position. AmpProbe will have more submissions to the New York regulatory agency this year. AmpProbe is cheaper, better and faster than existing technology and that is a \$3 billion market.

This is an awesome potential for a 47 million share company and who knows what will happen if the NIH has positive statements on their Optiquel test for Uveitis. The stock is 50% owned by Institutions and funds, 15% by insiders and I guess 10% by hedge funds. That leaves some 11 million shares in the float. If the Russell causes 2-3 million shares to be bought the float then become 8-9 million shares. Good news can really move the price.

### **Oakridge Global Energy Solutions, Inc. (OTCQB:OGES 0.48 ) \***

Oakridge global energy is a developer, designer and manufacturer of proprietary energy storage solutions. The Company is based out of Florida's "space coast" near Kennedy Space Center. They make premium quality, proprietary batteries, battery systems and lithium ion cells that are built for maximum performance over the traditional lead/acid batteries.

Oakridge Global Energy Solutions is commencing production of state-of-the-art Lithium-Ion batteries. The company is currently in the process of soliciting bookings for presale orders with several key industries to include the federal government. Perhaps the most important takeaway regarding Oakridge Global Energy Solutions lies in its relationships that will make it one of the few world manufacturers who are able to produce first generation lithium-ion technology that will surpass what is effectively being currently produced.

Furthermore, the company has developed an industrial design team that has incorporated a 21<sup>st</sup> Century contemporary art style to its cell products. The company has numerous patents for its technology but perhaps the most interesting of those centers around the Nano-sized lithium thin film solid state batteries with a Nano encasement. This product in itself stands to propel the company into areas that currently only it has the rights to manufacture in the United States. The Nano lithium thin film solid state battery has a large upside market potential both domestically and abroad.

Lithium ion batteries deliver twice the energy of nickel cadmium batteries and are the fastest growing battery segment. Their growth and demand dynamically forward trending. They are lightweight and easy to maintain. They deliver superior electro-chemical output and provide highest energy density for weight, non-metallic and are rechargeable. In 2015, the OGES Pro Series golf car was launched at the annual PGA show, the largest golf show in the world. OGES plans to have a new factory producing its patented thin film solid state lithium ion batteries by 2017. OGES is commencing delivery of a small format prismatic to help several smart card customers reach the next generation. Their growth will be serviced by the new factory. These batteries are also in a rapidly growing demand for a variety of applications.

**Gold Mining USA OTC: GMUI ( 0.005 )\*** Has both mining activities in Australia and the U.S. Gold Mining USA Inc is an emerging natural resources company focused on developing metallurgical and mining projects. The Company's business model is to acquire projects with the potential to provide significant resources through exploratory drilling and generate value through their development, joint venture or divestment. **Australia and Nevada** provide the opportunities to exploit smaller, undeveloped or previously mined gold resources that are of no interest to the large mining companies. In addition, there are numerous small hard rock and alluvial gold mines which have viable gold resources but are unable to raise the funds to start up or continue operations.

The company has signed an ongoing agreement with Cardno, a professional infrastructure and environmental services company, to assist in the evaluation and implementation of a work program on

one of its North America properties. Steve Craig, a well-known Certified Professional Geologist, will be heading up the efforts on the project.

**Night Food, Inc. ( NGTF.0.19 )\*** is a wholly-owned subsidiary of Night food Holdings incorporated in Nevada in 2013 to manufacture and distribute healthy-choice bedtime snacks. The Company has an exclusive agreement with RFI, natural ingredient manufacturer and proprietor of *Chocamine*, a patented chocolate ingredient

Americans keep gaining more weight. People have the tendency to grab for goodies at the end of the evening as they relax to enjoy some T.V. Eating and snacking too late at night is a contributing factor to gaining weight. Seventy percent of adults, ages 18-54, eat right before bed. Chocamine delivers the health benefits of chocolate to the body (amino acids, minerals and polyphenols) without the added sugars, caffeine or fat.

People give in to the intense hunger cravings that leads to the consumption of sugary, salty or calorie dense foods to satisfy their appetite. Most of the snacks that people typically eat create a disturbance in sleep, causing a person to wake up feeling unrested. Night Food offers nutrient filled alternatives to high-calorie junk foods. There are flavor filled snack bars-either *Cookies and Dreams* or *Midnight Chocolate Crunch* that will help curb hunger, satisfy cravings, improve rest and give the body essential vitamins and minerals. Consumers spend over \$50 billion/ year on night-time snacks, nearly 1 billion a week. More people desire healthy alternatives to late night consumption of the traditional fattening ice cream, chips and cookies.

Sugar and caffeine in most snacks causes disruptive sleep. Each bar has only 142 calories and 5 grams of fiber for slow absorption of energy and gives a feeling of fullness and satisfaction. There is also 132 mg of calcium and zinc for replenishing the body and feeling well rested in the morning.

**iSIGN Media Solutions ( ISDSF: \$ 0.066 )y** Announces Signed Contract Between We Build Apps and a Major Shopping Complex Located in Ohio. The contract covers installation of 500 Smart Antennas into a first Shopping Complex; Minimum Revenue to iSIGN is \$2.7 million Canadian.

Recent news has pushed it above its 30 day moving average and it had exceeded \$0.15 Canadian on a high volume breakout. The stock has been disappointing failing to move above its next resistance at \$0.20 and move towards its 2 yr high of \$0.28.

The Crocker people and their 22 developments could bring iSign significant revenues. Homeland Security and a major insurance company deemed the smart antenna as a safety device as well as a security device making the potential for new markets is limitless. One deal brings in 3 million times that by 20 deals because the insurance company theoretically gives a 20-25% premium discount to companies that use the smart antenna.

According to the iSign Media reseller, JEA Technologies, eHealth Consortium Group's intention is to start installations in hospitals located in the State of Victoria.

**Leo Motors ( LEOM: \$ 0.15 )\*** has patents for the electric battery industry which we will be writing about in upcoming weekly reports. They have developed a lithium battery that can operate vehicles in sub-zero climates. Their subsidiary LGM has developed battery technology supported by the Korean government to make it possible to use electric battery technology for fishing boats. They have a cartridge system which is a light-weight replacement method of swapping electric batteries.

Fishing has been harmed by the noise and oil leaks from internal combustion engines. LGM has solved that problem and besides eliminating the toxic problem, operating costs are reduced by 25%.

In addition they have a special patent for averting electric hazards and shocks. Leo developed the Internet of Things for e-boats which is networked and connected with an Android Operating System. Leo's power supply system is CAN ( Controller Area Network ) based, which enables mobile diagnosing between mobile devices and boats using the Leo technology.

Leo is developing a battery swap system for Kalmado in Puerto Princesa, Philippines which is a world famous tourist attraction. They will be converting 100 boats as the environment is expected to become 100% free of the toxicity from internal combustion engines. Also, Leo has developed a battery swap system for Go-Karts to be used in malls in China, Korea and Myanmar.

## **Fundamental Analysis Stocks To Buy with Stops**

Using fundamentals the following are stocks to buy and they have done well. The table is hypothetical. We have taken numerous profits as indicated on the table below. Balance is critical.

The Boeing made two closes over the 200day M.A. on August 11<sup>th</sup> and 12<sup>th</sup> thus taking us out of a short position. The BA should have been shorted again on Sept 9<sup>th</sup>.

We were stopped out of the long HOG on August 29<sup>th</sup>.

We are still very much interested in the Flushing Financial and finally bought FFIC at our theoretical buy limit. You should have bought the HDGE on a close above 9.65. We paid \$ 9.76 on a theoretical buy on the opening Sept 12<sup>th</sup>. Stop at \$ 9.47.

#### **Rule 17B Attestations and Disclaimers**

Princeton Research, Inc. has approximately 2,581,578 shares of AIVN both free and restricted and represents them for Investor relations. Princeton also has about 40,000 shares of TXGE. Princeton is paid \$ 1,500 per month from RMS Medical Products. Princeton has bought 81,100 shares of RMS Medical Products. Princeton was paid \$ 2,500 to write a report on Xinerdy. Princeton has signed a

contract with CBLI to be paid \$ 2500 for July and August for investor relations. Princeton has been engaged by Target Energy. No contract is currently in place. Princeton was paid about 500,000 restricted shares of Leo Motors.

When there is no movement in penny stocks, even though there is none or very small losses, we will liquidate ( sold AIVN on stop ) even though we like the company, if money is needed for better opportunities.

We now believe REPR represents upside opportunity. The Target ADR trades at about \$ 4.50 in U.S. vs 0.05 in Australia. Princeton owns 400,000 Australia shares and about 900 U.S. ADR's.

Pursuant to the provisions of Rule 206 (4) of the Investment Advisers Act of 1940, readers should recognize that not all recommendations made in the future will be profitable or will equal the performance of any recommendations referred to in this e-mail issue. Princeton may buy or sell its free-trading shares in companies it represents at any time.
